

**Project Description:** The applicant requests the reinstatement of, and modification to, CUP 960 (as previously modified by LU06-0011) to authorize the continued operation of, expansion of, and various operational safety changes to, the existing wastewater treatment facility (NCZO section 8105-5, "Community Wastewater Treatment Facility") (Case No. PL15-0106) until August 30, 2040.<sup>1</sup>

The applicant seeks to continue to accept, treat and dispose offsite by trucks various types of non-hazardous waste streams. Accepted non-hazardous wastes will be treated onsite to separate solids and liquids, consolidate treated wastes and truck the treated wastes to other off-site disposal facilities. Wastes, from each type of waste stream, will be treated to a level acceptable by the off-site receiving facilities.

Historically, the subject facility discharged treated wastewater into an existing 12-mile sewer discharge pipeline connected to the City of Oxnard's Wastewater Treatment Plant. The use of this pipeline is no longer a part of this project.

### **Non-Hazardous Waste Streams Accepted**

The following domestic and industrial non-hazardous waste streams are proposed to continue to be treated at the wastewater treatment facility in accordance with local, state, and federal requirements that regulate the safe handling of equipment, and the treatment and disposal of these types of waste streams:

- Domestic Wastes: Wastes such as septic tank waste, port-a-potty waste and secondary sewage.
- Industrial Wastewater Containing Metals (40 Code of Federal Regulations (CFR) Part 437 Subcategory A wastes): Wastes such as neutralized acid wastewater, boiler blowdown brine, and metal finish wastewater.
- Industrial Wastewater Containing Organics (40 CFR Part 437 Subcategory C wastes): Wastes such as solvent bearing wastes, contaminated groundwater clean-up from non-petroleum sources, landfill leachate, floral wastewater and tank clean-out fluids from organic non-petroleum sources.
- Oily Wastewater (40 CFR Part 437 Subcategory B wastes): Wastes such as materials from oilfield wastewater, oil spills, oil-water emulsions, contaminated groundwater from petroleum sources, bilge water and aqueous and oil mixtures from parts cleaning operations.
- Oilfield Sludge Wastes: This category includes the following:

---

<sup>1</sup> CUP 960, as modified by LU06-0011, was originally approved to authorize the operation of the SCWW facility until August 30, 2040.
